Motor-Pump Unit

**ABSTRACT OF THE DISCLOSURE**

The invention relates to a motor-pump unit 1 for a motor vehicle brake system, comprising a motor [4] and a pump 3 which is provided with a shaft 5 that is driven by said motor [4], with the shaft end 15 being rotatably mounted by means of at least one bearing 8 in an accommodating member 2 having valves and connecting channels, said shaft 5-driving displacement means which are disposed in a chamber 11 that can be filled with pressure fluid. In order to improve vacuum filling of the brake system with pressure fluid, the invention discloses that the shaft end 15 terminates into a free space 16, and that at least one connection 19 is provided between the free space 16 and the chamber 11.
